

# Cordell® estimator v3

Cordell estimator v3 is the new electronic estimating solution from Reed Construction Data. Available via the Internet and incorporating our entire range of pricing databases, you can access and create estimates on any web-enabled computer, 24 hours a day, 7 days a week.

You may be familiar with our PC software but the new Cordell estimator v3 online solution now takes estimating building costs to a totally new level, making estimating more reliable and accurate than ever before. Cordell estimator v3 allows you to quickly prepare job estimates online using either Cordell or your own pricing information. One main price list stores your information alongside Cordell data, giving you the convenience of all the prices you'll need in one location.

Simply work your way through the various categories in one of the Cordell databases covering either Commercial, Housing, Plumbing & Drainage, Landscaping or Insurance claims work and select the items to be included in your estimate...it really is that easy!

Cordell database items include separate labour and material prices so you can clearly see what has been included in each rate. Our individual databases for each state ensures you have the most relevant information for your business.

Adding your own categories, items, recipes and pricing information is a breeze and because the information is stored in one central location it's so easy to access.

Your estimating is now made even easier through our powerful job template facility that allows you to create and merge templates together. When you encounter a job that has similar features to a previous estimate, you can simply use your templates facility to create a new job estimate, speeding up the estimating process, saving you time and money.

## Secure Data Online

One of the biggest problems of a PC based estimating system is that you are responsible for backing up your own data. Cordell estimator v3 does away with all this as we continuously back up your data on multiple servers. Which means your data is always there when you need it.

Just as importantly, we realise that security of information accessed over the Internet is paramount. That's why we issue unique usernames and passwords for all of our web-based products. Your data is safely stored and access is strictly controlled by our PIX firewall technology.

We have resources monitoring our servers 24 hours a day, 7 days a week to ensure they are constantly working, so that you always have access to Cordell estimator v3, your data and estimates.
